Rationale

The Digital Technologies curriculum enables students to become confident and creative developers of digital solutions through the application of information systems and specific ways of thinking about problem solving.

Students acquire a deep knowledge and understanding of digital systems, data and information and the processes associated with creating digital solutions so they can take up an active role in meeting current and future needs.

The curriculum has been designed to provide practical opportunities for students to explore the capacity of information systems to systematically and innovatively transform data into digital solutions through the application of computational, design and systems thinking.

Scope and Sequence F-10

<http://victoriancurriculum.vcaa.vic.edu.au/technologies/digital-technologies/introduction/scope-and-sequence>

Foundation – Level 2	Levels 3 and 4	Levels 5 and 6	Levels 7 and 8	Levels 9 and 10
Digital Systems				
Identify and explore digital systems (hardware and software components) for a purpose	Explore a range of digital systems with peripheral devices for different purposes, and transmit different types of data	Examine the main components of common digital systems, and how such digital systems may connect together to form networks to transmit data	Investigate how data are transmitted and secured in wired, wireless and mobile networks	Investigate the role of hardware and software in managing, controlling and securing the movement of and access to data in networked digital systems
Data and Information				
Recognise and explore patterns in data and represent data as pictures, symbols and diagrams	Recognise different types of data and explore how the same data can be represented in different ways	Examine how whole numbers are used as the basis for representing all types of data in digital systems	Investigate how digital systems represent text, image and sound data in binary	Analyse simple compression of data and how content data are separated from presentation
Collect, explore and sort data, and use digital systems to present the data creatively	Collect, access and present different types of data using simple software to create information and solve problems	Acquire, store and validate different types of data and use a range of software to interpret and visualise data to create information	Acquire data from a range of sources and evaluate their authenticity, accuracy and timeliness	Develop techniques for acquiring, storing and validating quantitative and qualitative data from a range of sources, considering privacy and security requirements
Independently and with others create and organise ideas and information using information systems, and share these with known people in safe online environments	Individually and with others, plan, create and communicate ideas and information safely, applying agreed ethical and social protocols	Plan, create and communicate ideas, information and online collaborative projects, applying agreed ethical, social and technical protocols	Analyse and visualise data using a range of software to create information, and use structured data to model objects or events	Analyse and visualise data to create information and address complex problems, and model processes, entities and their relationships using structured data
			Manage, create and communicate interactive ideas, information and projects collaboratively online, taking safety and social contexts into account	Manage and collaboratively create interactive solutions for sharing ideas and information online, taking into account social contexts and legal responsibilities
Creating Digital Solutions				
Follow, describe and represent a sequence of steps and decisions (algorithms) needed to solve simple problems	Define simple problems, and describe and follow a sequence of steps and decisions involving branching and user input (algorithms) needed to solve them	Define problems in terms of data and functional requirements, drawing on previously solved problems to identify similarities	Define and decompose real-world problems taking into account functional requirements and sustainability (economic, environmental, social), technical and usability constraints	Define and decompose real-world problems precisely, taking into account functional and non-functional requirements and including interviewing stakeholders to identify needs
		Design a user interface for a digital system, generating and considering alternative design ideas	Design the user experience of a digital system, generating, evaluating and communicating alternative designs	Design the user experience of a digital system, evaluating alternative designs against criteria including functionality, accessibility, usability and aesthetics
		Design, modify and follow simple algorithms represented diagrammatically and in English, involving sequences of steps, branching, and iteration	Design algorithms represented diagrammatically and in English, and trace algorithms to predict output for a given input and to identify errors	Design algorithms represented diagrammatically and in structured English and validate algorithms and programs through tracing and test cases
	Develop simple solutions as visual programs	Develop digital solutions as simple visual programs	Develop and modify programs with user interfaces involving branching, iteration and functions using a general-purpose programming language	Develop modular programs, applying selected algorithms and data structures including using an object-oriented programming language
Explore how people safely use common information systems to meet information, communication and recreation needs	Explain how student-developed solutions and existing information systems meet common personal, school or community needs	Explain how student-developed solutions and existing information systems meet current and future community and sustainability needs	Evaluate how well student-developed solutions and existing information systems meet needs, are innovative and take account of future risks and sustainability	Evaluate critically how well student-developed solutions and existing information systems and policies take account of future risks and sustainability and provide opportunities for innovation
Achievement Standard				
By the end of Level 2, students identify how common digital systems are used to meet specific purposes. Students use digital systems to represent simple patterns in data in different ways and collect familiar data and display them to convey meaning. Students design solutions to simple problems using a sequence of steps and decisions. They create and organise ideas and information using information systems and share these in safe online environments.	By the end of Level 4, students describe how a range of digital systems and their peripheral devices can be used for different purposes. Students explain how the same data sets can be represented in different ways. They collect and manipulate different data when creating information and digital solutions. They plan and safely use information systems when creating and communicating ideas and information, applying agreed protocols. Students define simple problems, and design and develop digital solutions using algorithms that involve decision-making and user input. They explain how their developed solutions and existing information systems meet their purposes.	By the end of Level 6, students explain the functions of digital system components and how digital systems are connected to form networks that transmit data. Students explain how digital systems use whole numbers as a basis for representing a variety of data types. They manage the creation and communication of ideas, information and digital projects collaboratively using validated data and agreed protocols. Students define problems in terms of data and functional requirements and design solutions by developing algorithms to address the problems. They incorporate decision-making, repetition and user interface design into their designs and develop their digital solutions, including a visual program. Students explain how information systems and their developed solutions meet current and future needs taking sustainability into account.	By the end of Level 8, students distinguish between different types of networks and their suitability in meeting defined purposes. Students explain how text, image and sound data can be represented and secured in digital systems and presented using digital systems. They analyse and evaluate data from a range of sources to model solutions and create information. They manage the collaborative creation of interactive ideas, information and projects and use appropriate codes of conduct when communicating online. Students define and decompose problems in terms of functional requirements and constraints. They design user experiences and algorithms incorporating branching and iterations, and develop, test, and modify digital solutions. Students evaluate information systems and their solutions in terms of meeting needs, innovation and sustainability.	By the end of Level 10, students explain the control and management of networked digital systems and the data security implications of the interaction between hardware, software and users. Students explain simple data compression, and why content data are separated from presentation. They take account of privacy and security requirements when selecting and validating data and use digital systems to analyse, visualise and model salient aspects of data. Students share and collaborate online, establishing protocols for the legal and safe use, transmission and maintenance of data and projects. Students define and decompose complex problems in terms of functional and non-functional requirements. They design and evaluate user experiences and algorithms, and develop and test modular programs, including an object-oriented program. Students evaluate their solutions and information systems in terms of risk, sustainability and potential for innovation.

Level 5 Assessments		
Unit (Title)	Assessment	Achievement Standard/s
Digital Systems Investigation	Mini project involving the investigation of digital systems components and networks	1
Numbers Activity	Test involving questions about the binary number system	2
Student Survey Project a. Collect and interpret data	Questionnaire about school community and development of spreadsheet in Excel with validated data and charts on findings	3
Student Survey Project b. Communication of findings	Communication of findings on school blog or LMS	3

Level 6 Assessments		
Unit (Title)	Assessment	Achievement Standard/s
Programming Project a. Analysis	Table - Listing and discussion of functional requirements	4
Programming Project b. Design	Mock-ups and algorithms	4
Programming Project c. Development	Software solution and testing	5
Programming Project d. Evaluation	Written report - Evaluation of how the software solution meets functional requirements	6

Creating Computer Games

Levels 5 and 6

Unit overview

In this unit of work students apply the processes (analyse, design and develop) involved in creating a computer game using the visual programming language, Scratch. They explore design features of computer games and consider factors that influence the playability of games such as level of difficulty, speed and user interactions. Students prepare algorithms that identify decisions and steps to be followed in the game. They use Scratch to transform their designs into a functioning game. This unit is scheduled to take 10 weeks (three sessions each week) of teaching and learning. The teaching and learning plan focuses on the strands of Data and Information and Creating Digital Solutions.

Digital Technologies Curriculum

Digital Technologies Curriculum Content Descriptions - Levels 5 and 6

Data and Information

- Plan, create and communicate ideas, information and online collaborative projects, applying agreed ethical, social and technical protocols ([VCDTDI029](#))

Creating Digital Solutions

- Design a user interface for a digital system, generating and considering alternative design ideas ([VCDTCD031](#))
- Design, modify and follow simple algorithms represented diagrammatically and in English involving sequences of steps, branching, and iteration ([VCDTCD032](#))
- Develop digital solutions as simple visual programs ([VCDTCD033](#))

Digital Technologies Achievement Standard – Levels 5 and 6

Highlighted sections are addressed in this unit.

By the end of Level 6, students explain the functions of digital system components and how digital systems are connected to form networks that transmit data.

Students explain how digital systems use whole numbers as a basis for representing a variety of data types. They **manage the creation** and communication **of ideas**, information and **digital projects collaboratively using** validated data and **agreed protocols**.

Students define problems in terms of data and functional requirements and **design solutions by developing algorithms to address the problems**. They **incorporate decision-making, repetition and user interface design into their designs and develop their digital solutions, including a visual program**. Students explain how information systems and their developed solutions meet current and future needs taking sustainability into account.

Professional Learning with VCAA Specialist Teachers

Professional learning opportunities

Term 3 2017 Statewide Professional Learning Sessions

Victorian Curriculum F-10: Specialist Teachers sessions to support curriculum implementation

As part of the Education State support for implementation of the Victorian Curriculum F-10, professional learning sessions facilitated by Specialist Teachers are being offered. Teachers who attend the sessions will be able to examine and enhance their understanding of a specific curriculum area, and how to develop high quality teaching and learning programs.

There is no cost associated with registering for these sessions.

Ways professional learning can be delivered

Teachers in Victorian government, Catholic and independent schools will be able to access support from Specialist Teachers in one or more of the following ways:

1. Attend full day face-to-face workshops
2. Attend online sessions that are either an hour or 90 minutes duration
3. [Request sessions](#) for networks or clusters of schools.

Enquiries:

Any enquiries about Term 3 Specialist Teacher professional learning should be directed to:

Billy Nguyen, Program Officer, VCAA Curriculum Division by email: nguyen.huu.b@edumail.vic.gov.au 

Funding for government schools

Additional information relating to funding support for Government Schools can be [found below](#).

Types of sessions

Professional Learning Menu		
Civics*	Critical and Creative Thinking	Digital Coding
Ethical Capability	Financial Literacy	Health Education and Personal and Social Capability*
Literacy in the Early Years	Music*	STEM

Planning and Assessment in the Digital Technologies curriculum (F-6)

This session will introduce participants to planning and assessment in the Digital Technologies curriculum from F-6. They will become familiar with scope and sequence, content descriptions and how they link to the achievement standards, indicative progress, the development of rubrics and learning activities. This session will be suitable for all teachers.

Outline:

- Overview of the curriculum
- Scope and sequence
- Content descriptions
- Achievement standards
- Rubrics
- Indicative progress
- Student learning activities

VCE Software Development

VCAA Specialist Teachers in Digital Technologies

0.5 time fraction (half week)

Developing support materials, units of work, indicative progress and professional learning to assist schools in the understanding and delivery of the Digital Technologies curriculum.

In your school

Have you implemented teaching of Digital Technologies? (If so, at which Levels?)

How did you structure sessions?

Standalone lessons, unit of inquiry, specialist subject...

Development in Digital Technologies

Continuum of learning, building on complexity of thinking from previous band.

Three strands (Digital Systems, Data and Information, Creating Digital Solutions) - can be taught in conjunction.

Focus on developing thinking (Computational, Design, Systems) - define problem, develop solution, evaluate.

Levels 3 and 4, Levels 5 and 6 (Primary) - visual programming languages; block-based.

Levels 7 and 8, Levels 9 and 10 (Secondary) - general purpose and object oriented languages; text based.

Data and Information

Foundation – Level 2	Levels 3 and 4	Levels 5 and 6
Recognise and explore patterns in data and represent data as pictures, symbols and diagrams	Recognise different types of data and explore how the same data can be represented in different ways	Examine how whole numbers are used as the basis for representing all types of data in digital systems
Collect, explore and sort data, and use digital systems to present the data creatively	Collect, access and present different types of data using simple software to create information and solve	Acquire, store and validate different types of data and use a range of software to interpret and visualise data to
In Others create and organise ideas and information using information systems, and share these with known people in safe online environments	plan, create and communicate ideas and information safely, applying agreed ethical and social protocols	communicate ideas, information and online collaborative projects, applying agreed ethical, social and technical protocols

Developing complexity
- what is in focus?

Developing understanding -
how are we engaging?

Mapping the Digital Technologies curriculum

Data and Information

Addressing Content – Level 6

Digital Systems	Data and Information	Creating Digital Solutions
Examine the main components of common digital systems, and how such digital systems may connect together to form networks to transmit data	Examine how whole numbers are used as the basis for representing all types of data in digital systems	Define problems in terms of data and functional requirements, drawing on previously solved problems to identify similarities
	Acquire, store and validate different types of data and use a range of software to interpret and visualise data to create information	Design a user interface for a digital system, generating and considering alternative design ideas
	Plan, create and communicate ideas, information and online collaborative projects, applying agreed ethical, social and technical protocols	Design, modify and follow simple algorithms represented diagrammatically and in English, involving sequences of steps, branching, and iteration
		Develop digital solutions as simple visual programs
		Explain how student-developed solutions and existing information systems meet current and future community and sustainability needs

Content Descriptions and Achievement Standards

Foundation to Level 2 Content Descriptions

Creating Digital Solutions

Follow, describe and represent a sequence of steps and decisions (algorithms) needed to solve simple problems (VCDTCD017)

Explore how people safely use common information systems to meet information, communication and recreation needs (VCDTCD018)

Foundation to Level 2 Achievement Standard

By the end of Level 2, students identify how common digital systems are used to meet specific purposes.

Students use digital systems to represent simple patterns in data in different ways and collect familiar data and display them to convey meaning.

Students design solutions to simple problems using a sequence of steps and decisions. They create and organise ideas and information using information systems and share these in safe online environments.

Levels 3 and 4 Content Descriptions

Creating Digital Solutions

Define simple problems, and describe and follow a sequence of steps and decisions involving branching and user input (algorithms) needed to solve them (VCDTCD023)

Develop simple solutions as visual programs (VCDTCD024)

Explain how student-developed solutions and existing information systems meet common personal, school or community needs (VCDTCD025)

Levels 3 and 4 Achievement Standard

By the end of Level 4, students describe how a range of digital systems and their peripheral devices can be used for different purposes.

Students explain how the same data sets can be represented in different ways. They collect and manipulate different data when creating information and digital solutions. They plan and safely use information systems when creating and communicating ideas and information, applying agreed protocols.

Students define simple problems, and design and develop digital solutions using algorithms that involve decision-making and user input. They explain how their developed solutions and existing information systems meet their purposes.

Scope and Sequence

Foundation – Level 2	Levels 3 and 4	Levels 5 and 6	Levels 7 and 8	Levels 9 and 10
Digital Systems				
Identify and explore digital systems (hardware and software components) for a purpose	Explore a range of digital systems with peripheral devices for different purposes, and transmit different types of data	Examine the main components of common digital systems, and how such digital systems may connect together to form networks to transmit data	Investigate how data are transmitted and secured in wired, wireless and mobile networks	Investigate the role of hardware and software in managing, controlling and securing the movement of and access to data in networked digital systems
Data and Information				
Recognise and explore patterns in data and represent data as pictures, symbols and diagrams	Recognise different types of data and explore how the same data can be represented in different ways	Examine how whole numbers are used as the basis for representing all types of data in digital systems	Investigate how digital systems represent text, image and sound data in binary	Analyse simple compression of data and how content data are separated from presentation
Collect, explore and sort data, and use digital systems to present the data creatively	Collect, access and present different types of data using simple software to create information and solve problems	Acquire, store and validate different types of data and use a range of software to interpret and visualise data to create information	Acquire data from a range of sources and evaluate their authenticity, accuracy and timeliness	Develop techniques for acquiring, storing and validating quantitative and qualitative data from a range of sources, considering privacy and security requirements
Independently and with others create and organise ideas and information using information systems, and share these with known people in safe online environments	Individually and with others, plan, create and communicate ideas and information safely, applying agreed ethical and social protocols	Plan, create and communicate ideas, information and online collaborative projects, applying agreed ethical, social and technical protocols	Analyse and visualise data using a range of software to create information, and use structured data to model objects or events	Analyse and visualise data to create information and address complex problems, and model processes, entities and their relationships using structured data
Creating Digital Solutions				
Follow, describe and represent a sequence of steps and decisions (algorithms) needed to solve simple problems	Define simple problems, and describe and follow a sequence of steps and decisions involving branching and user input (algorithms) needed to solve them	Define problems in terms of data and functional requirements, drawing on previously solved problems to identify similarities	Define and decompose real-world problems taking into account functional requirements and sustainability (economic, environmental, social), technical and usability constraints	Define and decompose real-world problems precisely, taking into account functional and non-functional requirements and including interviewing stakeholders to identify needs
		Design a user interface for a digital system, generating and considering alternative design ideas	Design the user experience of a digital system, generating, evaluating and communicating alternative designs	Design the user experience of a digital system, evaluating alternative designs against criteria including functionality, accessibility, usability and aesthetics
		Design, modify and follow simple algorithms represented diagrammatically and in English, involving sequences of steps, branching, and iteration	Design algorithms represented diagrammatically and in English, and trace algorithms to predict output for a given input and to identify errors	Design algorithms represented diagrammatically and in structures English and validate algorithms and programs through tracing and test cases
	Develop simple solutions as visual programs	Develop digital solutions as simple visual programs	Develop and modify programs with user interfaces involving branching, iteration and functions using a general-purpose programming language	Develop modular programs, applying selected algorithms and data structures including using an object-oriented programming language
Explore how people safely use common information systems to meet information, communication and recreation needs	Explain how student-developed solutions and existing information systems meet common personal, school or community needs	Explain how student-developed solutions and existing information systems meet current and future community and sustainability needs	Evaluate how well student-developed solutions and existing information systems meet needs, are innovative and take account of future risks and sustainability	Evaluate critically how well student-developed solutions and existing information systems and policies take account of future risks and sustainability and provide opportunities for innovation
Achievement Standard				
By the end of Level 2, students identify how common digital systems are used to meet specific purposes. Students use digital systems to represent simple patterns in data in different ways and collect familiar data and display them to convey meaning. Students design solutions to simple problems using a sequence of steps and decisions. They create and organise ideas and information using information systems and share these in safe online environments.	By the end of Level 4, students describe how a range of digital systems and their peripheral devices can be used for different purposes. Students explain how the same data sets can be represented in different ways. They collect and manipulate different data when creating information and digital solutions. They plan and safely use information systems when creating and communicating ideas and information, applying agreed protocols. Students define simple problems, and design and develop digital solutions using algorithms that involve decision-making and user input. They explain how their developed solutions and existing information systems meet their purposes.	By the end of Level 6, students explain the functions of digital system components and how digital systems are connected to form networks that transmit data. Students explain how digital systems use whole numbers as a basis for representing a variety of data types. They manage the creation and communication of ideas, information and digital projects collaboratively using validated data and agreed protocols. Students define problems in terms of data and functional requirements and design solutions by developing algorithms to address the problems. They incorporate decision-making, repetition and user interface design into their designs and develop their digital solutions, including a visual program. Students explain how information systems and their developed solutions meet current and future needs taking sustainability into account.	By the end of Level 8, students distinguish between different types of networks and their suitability in meeting defined purposes. Students explain how text, image and sound data can be represented and secured in digital systems and presented using digital systems. They analyse and evaluate data from a range of sources to model solutions and create information. They manage the collaborative creation of interactive ideas, information and projects and use appropriate codes of conduct when communicating online. Students define and decompose problems in terms of functional requirements and constraints. They design user experiences and algorithms incorporating branching and iterations, and develop, test, and modify digital solutions. Students evaluate information systems and their solutions in terms of meeting needs, innovation and sustainability.	By the end of Level 10, students explain the control and management of networked digital systems and the data security implications of the interaction between hardware, software and users. Students explain simple data compression, and why content data are separated from presentation. They take account of privacy and security requirements when selecting and validating data and use digital systems to analyse, visualise and model salient aspects of data. Students share and collaborate online, establishing protocols for the legal and safe use, transmission and maintenance of data and projects. Students define and decompose complex problems in terms of functional and non-functional requirements. They design and evaluate user experiences and algorithms, and develop and test modular programs, including an object-oriented program. Students evaluate their solutions and information systems in terms of risk, sustainability and potential for innovation.

Unit of Work

Unit planner template

Unit title: Zeros and One	Subject: Computer Studies	Year level(s): 7	Duration of unit: 2 Weeks or 4 lessons
---------------------------	---------------------------	------------------	---

Identify curriculum		
Unit Overview	Learning Intentions (overall)	
	Knowledge	Skills
We live in the world of Big Data, students need to know how data is manipulated and represented in a digital system. This unit will cover the most common forms of media and demonstrate to students how computers represent this data.	To know be able to recognise the different number systems computers uses to represent text, image and sound data in binary.	To be able to explain how text, image and sound data can be represented and secured in digital systems and presented using digital systems.
Content descriptors (Victorian Curriculum)		
To know how digital systems represent text, image and sound data in binary		

Unit of Work

Assessment (including learning tasks)		
Prior Knowledge	Formative Assessment	Summative Assessment
At this level we may have to assume that the prior knowledge could be very low. Students may be familiar with Binary from maths and other number systems. They will be familiar with terms such as pixels and RGB. They probably will know something about colour theory from art.	<p>Teacher observation of classroom tasks and in class discussions.</p> <p>Teachers observation of uploaded work and homework tasks.</p> <p>Teacher review of student reflection questions, such as exit passes.</p>	Students will submit a report online that will demonstrate their ability to recognise how different data is represented on a computer. The report will include tables of data and answers to supplied questions.

Page Break

	Learning Intentions	Success Criteria	Teaching Strategies	Suggested Formative Assessment
Wks 1	<p>To learn how text can be represented in binary.</p> <p>To learn how images can be represented in RGB and Hexadecimal.</p>	<p>I can convert text into a binary signal.</p> <p>I can context a binary message into text.</p> <p>I can identify the RGB and Hexadecimal values of selected pixels.</p> <p>I understand how colour is represented on a computer screen</p>	<p>Direct instruction of concept</p> <p>Modelling how representations are made</p> <p>Micro-teaching concepts to small groups or individuals</p> <p>Allow students to generate their own expectations and review their own work.</p>	<p>Teacher observation of classroom tasks and in class discussions.</p> <p>Teachers observation of uploaded work and homework tasks.</p> <p>Teacher review of student reflection questions, such as exit passes.</p>
Wks 2	<p>To learn how audio is digitised in a computer</p> <p>To learn how audio can be represented in binary format.</p>	<p>I can identify individual samples of an audio file.</p> <p>I understand how audio is digitised in a computer</p>	<p>Direct instruction of concept</p> <p>Modelling how representations are made</p> <p>Micro-teaching concepts to small groups or individuals</p>	<p>Teacher observation of classroom tasks and in class discussions.</p> <p>Teachers observation of uploaded work and homework tasks.</p>

Options for delivery

- Specialist teacher delivers a standalone class
- Standalone class being taught by a generalist teacher
- Integrated unit of work (term or semester)

Secondary

- Standalone subject - compulsory
- Standalone subject - elective
- Integrated unit of work - part or full

Due to increasing specialisation in some content, less opportunity for integration.

Ample opportunity for cross-over in some areas (Data and Information).

- [Victoria Curriculum F-10 Revised curriculum planning and reporting guidelines, December 2015](#)
- No prescribed model of how Digital Technologies should be taught. This a school decision.
